The infographic features a central vertical timeline on a red background with a binary code pattern. It includes four main sections: 1. **205 BCE**: **The Antikythera Mechanism**. A circular inset shows a rusted metal fragment. Text: "In 1900, a group of people diving near the Greek island of Antikythera found this machine on the sea floor. For many years, no one understood what it was or how it worked. Scientists now say it was used to find out the positions of the sun, moon and stars. Many people call it the world's earliest 'computer'." 2. **around 2,700 BCE to today**: **The abacus**. Text: "People still use abacuses today in many parts of the world, especially to teach maths to children. Of course, they are very different from modern computers, but the idea is the same – to answer difficult maths questions much more quickly than a human can." 3. **1791–1871 and 1815–1852**: **Charles Babbage and Ada Lovelace**. A circular inset shows portraits of both. Text: "The modern computer was Charles Babbage's idea. The machine he wanted to build, called a 'difference engine', was special because it had all the parts that a modern computer has. It could save information and was also a kind of printer. Ada Lovelace was the first computer programmer. She had the idea for 'software' – a way of telling a computer to do different things." 4. **1940s**: **Alan Turing**. A circular inset shows a computer room. Text: "Alan Turing wasn't well known when he was alive, but he's now one of the most famous scientists of the 20th century. His ideas on computer science changed the world. He worked on the first digital computer – it was called Colossus, weighed 30 tonnes, and was as big as a large living room." A yellow **READING** box is at the bottom right, and a small blue icon with the number 90 is in the bottom right corner of the infographic area.
